Teste with CLANG, CLANGx64 and MSBT 64, problem not reproduced. Perhaps needs more instructions to reproduce?

Hi Mirek,

Do you mean that your MemoryUsedKb value did not keep climbing through all the five runs???

First, this is not a normal memory leak caught with debugger. This happens on Windows 11 Professional with all compilers: CLANG, CLANGx64, MSBT22, MSBT22x64. The MemoryUsedKb starts out at around 1200 kB on first start, and then keeps gradually rising up to about 20000.. 30000 kB when the fifth run is complete... and more if we let it run longer with higher values of x.

Best regards,

Tom
