In Win32.cpp I changed

```
FileSelector& FileSelector::AllFilesType() {  
    return Type(ToSystemCharset(t_("All files")), "*.*");  
}
```

to

```
FileSelector& FileSelector::AllFilesType() {  
    return Type(t_("All files"), "*.*");  
}
```

as Type() method converts charset (converting twice causes problems)
