Cannot reproduce.

Maybe if this could be done without using uppsrc sources and tpp, just in single package, maybe you can prepare for me "crashing package"?

Alternative, can you run it in debugger? :)

Mirek

I wasn't able to reproduce it in a new, small project. I tried to abuse logs branch to create a n instance but couldn't.

Could you try to unzip the 3 tpp files that's changed and replace their namesakes in uppsrc/Draw/src.tpp folder?

Then somehow go to Draw/Draw.h, line 45, try to display a topic++ help window for "int64 data".

Thanks!

IDK, there is just 1 .tpp file in .zip (Draw\_en-us.tpp) and it seems to be unchanged from the master...
