If link package to project and build with CLANG64 there is no problem

url: i.imgur.com/3VIFcia.png

But if try to build the same source with CLANG32 link phase fails with duplicate symbols

url: i.imgur.com/XaRIUSO.png

Minimal test project to reproduce in attached test-src.zip

I've already found solution <https://www.ultimatepp.org/forums/index.php?t=msg&th=12353&start=0&>

It's due to clang's stdlib function overriding method
