Some comments on patch:

FixName(): I don't know if this function is used on POSIX systems?

Ide::Opposite() method: there was some naming conflict, but I don't know why? So I renamed this method to Ide::OnOpposite().

Well, what a pity, I did the same thing yesterday (fixing U++ to compile in Linux).

As for that Opposite conflict, it is defined in X11 headers as

```
#define Opposite 4
```

(now tell me something about the importance of namespaces....
