Hello Mirek,

Thanks for preparing new stable version!

However, I have a concerns about the version naming convention. What about using semantic version convention? In this case we will have 2024.1.1 (major, minor, patch) instead of 2024.1a. a in version number might be consider as alpha, which I believe we would like to avoid. Also, consider changing stable branch name from stable to stable/2024.1. Thanks to that when we will avoid problems in the future when another stable branch might be needed.
