
Subject: DropDownList still taking capture after instructing it not to

Hi!

I have an app with a menu and a toolbar (among others) and a DropDownList on the toolbar.

Even though I instructed it to not take focus with `NoDropFocus()` and `NoWantFocus()`, it takes focus. Or some similar behavior.

It takes focus so hard that menu shortcuts no longer work.

I attached an example, where pressing F5 triggers a menu option and increments a display. If you open the DropDownList and cancel it, F5 works. If you select an option, F5 is eaten until you focus something else, in this example, the menu.

I have a bunch of other drop down on the toolbar, with MultiButton, and they do not eat F5.

I also tried installing the latest nightly, 17502, and I can't build with it. It says "there were errors", even in verbose mode.
