Lance wrote on Thu, 02 January 2025 18:58: I understand. A good library takes a great deal of effort from the library developers' side in order to make the library users' life easier. The dark theme(color/image) integration into u++ certainly is one of the example.

Oh, I did not mean library developer effort. I mean that your code has to be adjusted and tested for skin changes, otherwise it will have wrong colors after the change. Which means a lot of changes and code added to your code (in addition to that one line activation).
