Didier wrote on Thu, 27 February 2025 23:44Hello Mirek,

I think I found something interesting: when compiling in "verbose", all paths to UppHub packages get included although I have only included one in my application package dependencies.

So if I have same packages present in UppHub and in another nest (both nests present in nest config paths) ... things will probably get nasty

Ah, that is actually by design. Seems the design might be wrong...
