But it flickers... :) So I guess we should make it work with current code.

Anyway, after staring to the code for 40 minutes, I still cannot see the reason. So I have added some most likely possible fix, can you test please with master?

If that does not help, I would welcome adding some LOGs/DUMPs in some places...

Menu is gone again ...

Where would you like to add LOGs/DUMPs?

Wait a moment: Does it mean that what is missing is texts? I mean, that submenus are under "spaces"?

Mirek
