Thanks, that was the problem. For some reason all my Images have been loaded with hotspots at (0,-cy), but I have no idea why.

I think I missed this because the Image class doesn't have a SetHotSpot member (presumably because it's held in ImageBuffer and data->buffer could be NULL), and the only way I can find of setting a new hotspot is:

```
ImageBuffer ib;
Image img;

// Load an image here

ib = img;
ib.SetHotSpot(Point(0,0));
img = ib;
```

As far as I can tell this won't actually do any deep copying, but is it really the best way?
