Hey all,

Just a small update: I started writing a new book titled "High performance Web Servers in modern C++ using the U++ Framework".

This time I want to aim at people interested in C++ web servers, and show them the powerful U++ Framework. It will be easier to find on Amazon, and better to find more people that will become

Some progress indicators: at this moment I have written 89 pages, and I hope the book to be ready by the end of the year.

I will start asking some help from now on by you guys...

Until next time!
Frederik.
