Hi,

As we are getting closer to release 1.0, Bobcat received many improvements, changes and bug fixes under the hood.

One convenience feature is that Bobcat now has a specifications document built in its embedded help system.

You can check which sequences and modes are supported by invoking help. It's basically TerminalCtrl's specs, but with few modifications.

It can act as a reference doc for developers or users who want to utilize Bobcat's features in scripts.

Best regards,
Oblivion
