forlano wrote on Mon, 13 November 2006 03:32Hello,

I've done some experiment with the GridCtrl I got from the Nico's application.

The gridctrl looks great but I wonder if it has some capability of the arrayctrl. For example can I add a droplist or a toggle button to a column?

Moreover, I was able to let appear the control but not to edit its cells. I used several options but the edit was not possible. I would like to know if there is a very little piece of code that set a gridctrl with all the cells editable.

Thank you

Luigi

Yes it is possible. Just do:

```
EditString edit;
```

```
DropList drop;
```

```
grid.AddColumn("c0").Edit(edit);
```

```
grid.AddColumn("c1").Edit(drop);
```

That should be enough. I don't remember what edit mode was set as default in 0.95 version. But to edit row (all controls are visible) add `grid.EditMode(0)`. In that mode controls become visible if you press enter or make double click on row.

Please paste your code here (or send it to me) so I could check it.

New version of grid has support for "control in every cell" mode and a tutorial. I will public it very soon.
