Oy!

I'm getting too many linker errors to continue using upp for the moment. Need to find a way to resolve those guys first... then I'll come back and give feedback.

More specifically, I thought it'd be easy to find a way to include the boost.threads libraries. It turns out quite the opposite. For some reason, the mingw that comes with upp doesn't want anything to do with compiling boost libraries. I'm sure there's a way around it, and I'm not at all trying to hate on upp. I'll find a resolution for this in my spare time.

For now, unless anyone else knows a quick solution, I'll get this running in devC++, and then sometime late get those libraries into upp, as I still prefer upp's charm.

More still to come, I'm know for sure.
