Hi,

I have a windows app sample to read data from USB device.
The sample is created for VC++ which is working properly, then i want to convert it to Ultimate++.

My step:
1. define WM_USB_MSG as WM_USER + 100
2. register the message from it's API
3. Inherited a struct from TopWindow
4. Override WindowProc

The problem is i never got the message.
Did i missed something?
How to read WM_USER properly?

Thanks

PS: I'm using latest 611-dev2
