Well, as TheIDE package selector seems to work OK and does exactly the same (in fact, even using ArrayCtrl and ColumnList , I am afraid testcase is needed.

Mirek

Here is the test package that reproduce the problem. I forget to mention that Arrayctrl and columnList are on one side of a splitter, so i've added one, and there is present even a richtextctrl.

First press "Show" and let appear the column. If you click on its leftside you will not be able to set the cursor. This can be possibile if you click instead on the right side.
I've discovered that if I remove the RichTextCtrl from the layout then everything became normal
In fact the distance from the left border to the point where your click set the cursor is just that of the richtextctrl! So I suspect it is this one that screen the columnlist despite of its small dimension.

Thank you,
Luigi
