
Subject: Bug "Self-invalidating time in EditTime"?

I have a ParentCtrl and on it an EditTime.

I enter "12" into EditTime. The Ctrl's background stays white which should indicate that this value is to be accepted.

When I leave this control the "12" is replaced by "11/18/2006 12:00:00" which makes absolutely sense: today's date and 12 hours 0 minutes and 0 seconds.

But at the same time the background turns red indicating that this will not be accepted! Indeed trying to leave the application results in the error message "Invalid date/time:invalid character '/' following date/time." (It goes without saying that there is no '/' following, at least not a visible one.)

Am I missing something?

Werner
