Hi Mirek!

>>> Well, TheIDE splash-screen would classify, would not it?

Not exactly. I still have a Splash Screen. But I want the applications main window (!) to stay in front off all others. Now I found a solution with popup (and protect it from closing with "WhenClose") - but no way to get the real screen resolution - because GetWorkArea() does exclude the windows task bar. But I want to place the window over the taskbar too.
