Hello,

my arrayctrl has different columns. One of these has an optionbutton. I've activated the sort with respect some column (not that of the optionbutton). When the sort is performed everything is OK except the data in the column of the optionbutton. It seems it is non sensible to the sort. In other words, after the sort is destroyed the correlation between the data of column with the optionbutton (i.e. its state) and the rest of the arrayctrl! (please let me know if a test case is needed).

Luigi
