Hi,

I have the setup in "Setup/Build methods" menu, as suggested:

- PATH: "C:\Program Files\MySQL\MySQL Server 5.0\bin"
- INCLUDE: "C:\Program Files\MySQL\MySQL Server 5.0\include"
- LIB: "C:\Program Files\MySQL\MySQL Server 5.0\bin"

Aside from a lot of warnings about deprecated usage, when I attempt to build the example I get a fatal error:

----- MySql ( MAIN MSC8 DEBUG DEBUG\_FULL BLITZ WIN32 MSC ) (4 / 4)

MySql.cpp

MySql: 1 file(s) built in (0:01.52), 1522 msec / file, duration = 1542 msec

Linking...

LIBCMTD.lib(crt0.obj) : error LNK2019: unresolved external symbol \_main referenced in function  
\_\_tmainCRTStartup

C:\upp-mingw\out\MSC8.Debug\_full\MySql.exe : fatal error LNK1120: 1 unresolved externals

There were errors. (0:13.32)

Any suggestions?

Thanks.
