Subject: GTK theming a reality

After a couple of weeks of pretty messy development, kick-off of GTK chameleon is now in main sources.

At the moment, it just reads system colors and font and "chameleonises" Button, Option and Switch, but obviously, even so little makes a huge difference...

Please test! And test with as many themes as possible...

BTW, you do not have to have GTK development headers installed to develop with U++ - GTK is loaded at runtime. Actually, it does not have to be even present either - in that case, U++ default theme is used (after an attempt to read KDE colors and font...))
