on page:[http://www.ultimatepp.org/appside\\$install\\$en-us.html](http://www.ultimatepp.org/appside$install$en-us.html) suggest Vista SDK and it's embedded Compiler.I tried it,the embedded Compiler is VC8,so it has the "newline in constant" for none English character.then tried to used toolkit2003 with Vista SDK,this time the SDK head file complained missing "sal.h" file.I found the file is in SDK/VC/INCLUDE.I have no idea to solve it.so I turned back to 2003SDK+VC2003Toolkit.the standby is Mingw.

just a note.

any suggestion will be appreciated.

btw:does pic below means SDK will be second place in the future?
