
Subject: Variables windows during debug

During debug you see variables in the bottom of the screen.

What I am suggesting is to:

1/ sort them, and sort their inner variables too (also during exploring).

2/ In Auto's window: Show the result of the last completed function. And if for example it's code like:

```
int func(int i) { return i*2; }  
=>  
i = 10;  
func( func( func(i) ) );
```

Then it should show:

```
func returns    20  
func returns    40  
func returns    80  
i               10
```

So basically it's like: show return of each function + the variables used in those function calls...

This behaviour reflects the one of Visual Studio IDE.
