Ok,

I double checked how messageboxes are working:

- \* OK alone: ESC -> removes the messagebox, returns "OK"
- \* Cancel in the box (for example ok/cancel or yes/no/cancel or ...): ESC -> removes the box, returns "Cancel"
- \* yes/no: ESC -> Doesn't work.

Greetz,  
Steven

```
void show_msgbox( const wxString& w, int buttons )
{
    int id = wxMessageBox( w, wxMessageBoxCaptionStr, buttons );
    switch( id )
    {
        case wxOK:    wxMessageBox( w + wxT(" -> wxOK") );    break;
        case wxCANCEL: wxMessageBox( w + wxT(" -> wxCANCEL") ); break;
        case wxYES:   wxMessageBox( w + wxT(" -> wxYES") );   break;
        case wxNO:    wxMessageBox( w + wxT(" -> wxNO") );    break;
        default:
            wxString msg = wxString::Format(wxT("%ld"), id );
            wxMessageBox( msg );
            break;
    }
}

#define wxBOX(a) show_msgbox(wxT(#a), a)
wxBOX(wxOK);
wxBOX(wxYES_NO);
wxBOX(wxYES_NO|wxCANCEL);
wxBOX(wxOK|wxCANCEL);
```
