+ Sql loggin now marks statements executed via global SQL with "SQL* " prefix
+ U++ promts now have GTK icons
+ many additions to GTK theming system
+ QTF "foreign character" escape
+ tips in *.lay files
+ improvements to quick comment/uncomment (original patch by Aroman)

block of text can be commented and uncommented by pressing the same key again
/ enloses text with // signs
* enloses text with /* */
ctrl + / encloses text with

```
/*
 * some text
 */
```

if part of one line is selected in all cases text is enclosed with /* */

- some fixes to win32 TrayIcon
- wsDrawPolyPolyPolygon fixed (the polygon has wrong position and size in Report)
- documentation fixes

As usually Bas prepared Debian packages.
