Thanks but I tried that already in the mysql example and got another error saying it cannot find mysqlclient which is right there.

And in "Build methods" I have added both /usr/lib64/mysql and /usr/lib64

```
/usr/lib64/mysql/libmysqlclient_r.a  
/usr/lib64/mysql/libmysqlclient_r.so.15.0.0  
/usr/lib64/mysql/libmysqlclient.a  
/usr/lib64/mysql/libmysqlclient_r.so.15  
/usr/lib64/mysql/libmysqlclient.la  
/usr/lib64/mysql/libmysqlclient.so  
/usr/lib64/mysql/libmysqlclient.so.15  
/usr/lib64/mysql/libmysqlclient_r.la  
/usr/lib64/mysql/libmysqlclient_r.so  
/usr/lib64/mysql/libmysqlclient.so.15.0.0  
/usr/lib64/libmysqlclient_r.so.15.0.0  
/usr/lib64/libmysqlclient_r.so.15.0  
/usr/lib64/libmysqlclient_r.so.15  
/usr/lib64/libmysqlclient.so  
/usr/lib64/libmysqlclient.so.15  
/usr/lib64/libmysqlclient_r.so  
/usr/lib64/libmysqlclient.so.15.0  
/usr/lib64/libmysqlclient.so.15.0.0
```
