Thanks but I tried that already in the mysql example and got another error saying it cannot find mysqlclient which is right there.

And in "Build methods" I have added both /usr/lib64/mysql and /usr/lib64

```
/usr/lib64/mysql/libmysqlclient_r.a
/usr/lib64/mysql/libmysqlclient_r.so.15.0.0
/usr/lib64/mysql/libmysqlclient.a
/usr/lib64/mysql/libmysqlclient_r.so.15
/usr/lib64/mysql/libmysqlclient.la
/usr/lib64/mysql/libmysqlclient.so
/usr/lib64/mysql/libmysqlclient.so.15
/usr/lib64/mysql/libmysqlclient_r.la
/usr/lib64/mysql/libmysqlclient_r.so
/usr/lib64/mysql/libmysqlclient.so.15.0.0
/usr/lib64/libmysqlclient_r.so.15.0.0
/usr/lib64/libmysqlclient_r.so.15.0
/usr/lib64/libmysqlclient_r.so.15
/usr/lib64/libmysqlclient.so
/usr/lib64/libmysqlclient.so.15
/usr/lib64/libmysqlclient_r.so
/usr/lib64/libmysqlclient.so.15.0
/usr/lib64/libmysqlclient.so.15.0.0
```
