I am not sure for Gnome, but for fluxbox: yes, it worked.

But now TheIDE crashes my X-Session when started within fluxbox so i can't figure out wether it worked on Ubuntu 6.06 and not on Ubuntu 6.10 (using fluxbox).

firefox and xterm do maximize on the second screen so i guess it is an problem related to TheIDE.

Bas

Hm, any idea what could cause this problem? (I have just single screen here...).
