Subject: About the sort of the GridCtrl
Posted by forlano on Fri, 15 Dec 2006 19:14:19 GMT

Hello,

If I sort a GridCtrl alphabetically in ascendet way (see column Player Name) I observe the
following situation when some of the cells are empty.

Instead I would like to have at bottom the rows with empty cells in the column interested by the
sort. Is there a smart method to do it? (otherwise I will move up the rows one by one by copy and
past)

Luigi
