I stepped through the serialisation code earlier to confirm it did indeed break endianness. (File is saved in little). After setting the sizes to 16x16 it became saved in big-endian and just worked but that's not ideal either

Changes for OSX11 are:

Package Organiser:

CtrlLib: Add Package, When "OSX11": PdfDraw

Draw: New Libraries, When "OSX11": X11 Xft fontconfig Xrender freetype expat

Only patching that is questionable is the plugin/bmp/bmhdr.h with my extra casting.

So currently, you set "flagPPC" or "flagX86" in the Build Environment variables. This will trigger code to add "-arch X" for cc and lnk times.
