Subject: Can't Seem to See Console Output While In the Debugger

Noob alert.
Anyway, can someone tell me how to view my console output (eg. cout << x) while debugging?
When I execute my compiled program I can see the standard output just fine. I think there must be
a window in TheIde that allows me to see what I'm printing to standard output. I've been clicking
for a few hours now so any help is greatly appreciated. I'm running Suse 10.1 with the latest
ultimate++ as of posting.
Thanks
Patrick
