In oracle limit and offset not work.....

Is very hard implement oracle dialect version of .Limit() and .Offset() why original query be bound to encapsulated in another select.

.....

```
SELECT * FROM (original query....) WHERE ROWNUM BETWEEN my_offset AND  
my_offset+my_limit;
```

.....

In SqlArray is possible to test Dialect and make another query (2 nested select) only for oracle dialect.

Any other idea ?
