fabio wrote on Wed, 20 December 2006 10:49In oracle limit and offset not work.....

Is very hard implement oracle dialect version of .Limit() and .Offset() why original query be bound to encapsulated in another select.

.....

```
SELECT * FROM (original query....) WHERE ROWNUM BETWEEN my_offset AND  
my_offset+my_limit;
```

.....

In SqlArray is possible to test Dialect and make another query (2 nested select) only for oracle dialect.

Any other idea ?

Actually, dialects are gone. U++ is now able to "compile" SqlExp for each rdbms (well, able in sense that core of technology is there, but not all variants are implemented).

Anyway, in this case, it is indeed a problem because Oracle lacks this clause.
