You can implement "limit and offset" at fetch level.

Many objects (Java, VB...) fetch and discard rows, simulating (one-way) limit and offset.....

In oracle 10g (and 9) is present a new version of OCISmtFetch for make a clean limit solution:

```
OCISmtFetch2(stmthp, errhp, 1, OCI_FETCH_RELATIVE, fetchOffset, OCI_DEFAULT);
```

This fetches a row from the (scrollable) result set.

But, this oci function, and scrollable cursor feacture, is not present in oci8.
