Thanks, that was quite fun, and the apple docs are pretty good.

But yes, we need someway to be able to specify linker flags, I think you should just add link options, next to compile options in the build environment, but I guess I can also get around that with `-Wl,flags` but that is very noisy.

Also, the ide leaves a lot of zombies around when compiling, are you calling `wait(3)` properly on the children?

Lund
