Quote:

However, in the layout tool of TheIDE,
the size of controls are assigned in

`LeftPosZ(16, 108).TopPosZ(20, 36)`

There are "Z" postfix in there functions,
which means the size of there controls are "Zoomed".

Well, I guess that is a little misunderstanding. It actually means that they "have to be Zoomed".

BTW, remove Z and they will be pixel-exact.
