Hi Mirek,
First, many thanks for a really outstanding tool.

Second: re enterprise tools:
1. Project management support: e.g. links with planner, reporting tools;
2. Team support: e.g. code sharing/re-use repository;
3. CVS (or other version control) support;
4. Testing & QA support
5. Direct link to professional support for UPP
   (*most important - managers want the security of telling someone else to fix there problems)

Regards
