Gatling_Gun wrote on Fri, 05 January 2007 06:19I wish to calculate an md5 hash with a MASM module written myself.
How i can use the MASM function ("$ GetMD5 [file(s)]") in u++?

thanks a lot

Maybe you shoul check first whether your version is faster than one provided with U++ (in Web package)

U++ does not directly support assembler. But you coould add it as library, as standalone object file or as .asm in package and use custom build step to compile.
