Gatling_Gun wrote on Sun, 07 January 2007 13:38 Help me with this code...

```
char[10] = text1.GetText().ToString();
```

Ok char to string is an invalid conversion but I try `c_str()` but don't recognize it!

Please help me!

"char[10]" seems to be syntactically wrong (unless you use some preprocessor magic). You might try this:

```
char ten_characters[10];
```

But why not simply write:

```
String a_string = text1.GetText();
```

If "GetText" returns a pointer to an array of chars, this is automatically casted to a String.
