wimvanherp wrote on Mon, 08 January 2007 15:07when I try to create a package in a subfolder of the chosen nest, the subfolder and files are created but not loaded in the IDE .

f.e. new package : create in : d:\ultimateapps  
package name : test2  
ctrlib application with main window

this works allright

when i try package namd : test/test3 (as i find in the doc)

the folders test and test3 are created as well as the cpp and upp files but the package cannot be loaded in the IDE

Is this a bug or am i doing something wrong ?

I have just tested, seems to work OK for me. That does not mean it is not a bug, but you must be doing something differently....
