mobilehunter wrote on Thu, 11 January 2007 21:36I just try the UWord with some japanese text, but when i export it to PDF, then open it but no japanese character showed, only boxes.

Do you guys know how to get proper result?

Thanks

This is most likely a bug in PdfDraw. Maybe a problem in TTF handling code.

Well, first things first - do you see text in UWord correct? What is the platform? If platform is Win32, does it print OK? Can you save and load the text?

If the last answer is yes, please save&zip&upload here the text so that we can fix the issue.
