this question regards both arrayctrl and gridctrl.
I know how to set the background color of a cell by using SetDisplay. But what to do to set the background color of a row?

Luigi

GridCtrl:

```
grid.GetRow(22).Bg(Red);
```

I've used it at runtime, not in the constructor, and I discovered that was necessary to add the instruction `grid.Repaint()` to see the new color. I guess this is normal.
