coolman wrote on Thu, 18 January 2007 05:11How can I use DateTimeCtrl in new versions U++?
Is There some example?

I found one example in HomeBudget but I want to use DateTimeCtrl in .lay file.

You can do it. Just go to your layout and put UClass on the form. Then write the class and object name in properties pane.

It can be cumbersome though. I'll try to add missing code to ctrl.lib.usc before final release so you could use it as any other upp widget.
