mobilehunter wrote on Thu, 18 January 2007 11:17At Util.cpp, function FromSystemCharset
Please replace the return line with this code.

```
return ToUtf8(WString(b));/WString(b).ToString();
```

I also add code to Display sample

```
SetDefaultCharset(CHARSET_UTF8);
```

This make Display sample show the japanese font names,

Hm, looks like you found the cause... Stupid me.

Anyway, I think

```
SetDefaultCharset(CHARSET_UTF8);
```

is enough to make it work (it makes WString(b).ToString() and equivalent of ToUtf8(WString(b)) - please check!).

BTW, maybe it is the time to fix one mistake I have done - "default" default charset should rather be UTF-8 than win-1252, right?

Any idea what that can break?
