```
static Ctrl *Ctrl::GetMouseCtrl();
```

returns (child) widget with mouse.

```
TopWindow    *Ctrl::GetTopWindow();
```

returns window child widget is in. Therefore:

```
Ctrl *GetMouseWindow()
{
    Ctrl *q = Ctrl::GetMouseCtrl();
    return q ? q->GetTopWindow() : NULL;
}
```

should solve your problem.
