luzr wrote on Sat, 27 January 2007 23:35 Actually, I am not sure why you are trying so complicated approaches.

If you need transparent background and round corners, do just that.

Make your widget Transparent(), draw round corner images in .iml designer (with transparent areas) and draw your cards...

Mirek

I wanted to be able to know if I make certain things dynamic, and later I'll be wanting to include external images from the hard drive, and make a certain color show as transparent (e.g. Chess pieces).

But, I suppose for the sake of learning, I'll just try it this way. Thanks.
