Tobbe wrote on Tue, 30 January 2007 13:46Hi

Is there any way to get a native Open dialog in windows xp?

//Tobbe

Well, it is C++, you can always use Win32 API.

Also FileSelector is encapsulation of win32 open dialog, but I believe you have to do something more to get XP version (I believe there was recipe some time ago on this forum - try search).
