Hmm, what you mean by that?

Are you suggesting adding Open method to the TaskbarButton class like this one...

```
TaskbarButton::Open(TopWindow &wnd)
{
    wnd.Open()
}
```

.. to reduce main initialize code?

Frankly I would like to have a better solution. I had the same problem with other 3rd party libraries which required to pass to them hwnd value. What about adding WhenShow callback in TopWindow class which should be called when hwnd is accessible?
