
Subject: libpng runtime errors in user app
Posted by [ebojd](#) on Wed, 31 Jan 2007 09:23:03 GMT

I am playing with a couple of examples (CodeMetric, ImageView) to form a basis for one of my applications. I am currently getting the following runtime error (not: I cannot cut from the error window to the web browser so I am typing the salient pieces here):

Failed to read valid object from image memory.

...

libpng error: Incompatible libpng version in application and library

<standard SIGSEGV segfault message>
0xb7dfc00e in png_destroy_read_struct () from
/usr/lib/libpng12.so.0

I'll go back to some old code and try to work at it from a different direction, but can anyone offer some suggestions why the application is using the libpng that is in /usr/lib instead of the one that is built in the plugins?

Thanks,
